Microsoft Agent 365 is the control plane for agents

Manage agents with the same control, structure, and confidence as users

As agents become part of everyday work, organizations struggle to understand what agents exist, how they behave, and whether they are safe to operate at scale.

From agent experimentation to enterprise operations, **Agent 365** extends your existing data management, security, and governance processes without reinventing your infrastructure.

Without a control plane:

- Agents grow without visibility
- IT lacks confidence to move beyond experimentation
- Security teams are forced into reactive responses

Agent 365 provides the control plane organizations need to observe, monitor, and secure AI agents across the business.

What is Agent 365?

Agent 365 is the control plane for AI agents. There is no need to reinvent how management works. The fastest path to control is managing agents the same way you manage users today.

Agent 365 extends familiar identity, access, security, and governance principles to agents—treating them as first-class digital actors aligned to your business standards.

Manage agents like users

Agent 365

The control plane for agents

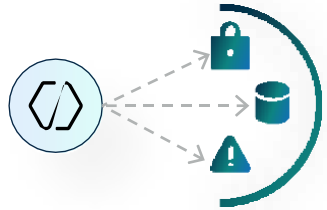
Observe

Monitor and manage agents in real time

Govern

Govern agents throughout their lifecycle

Secure



Protect all agents comprehensively

Observe: see every agent, everywhere

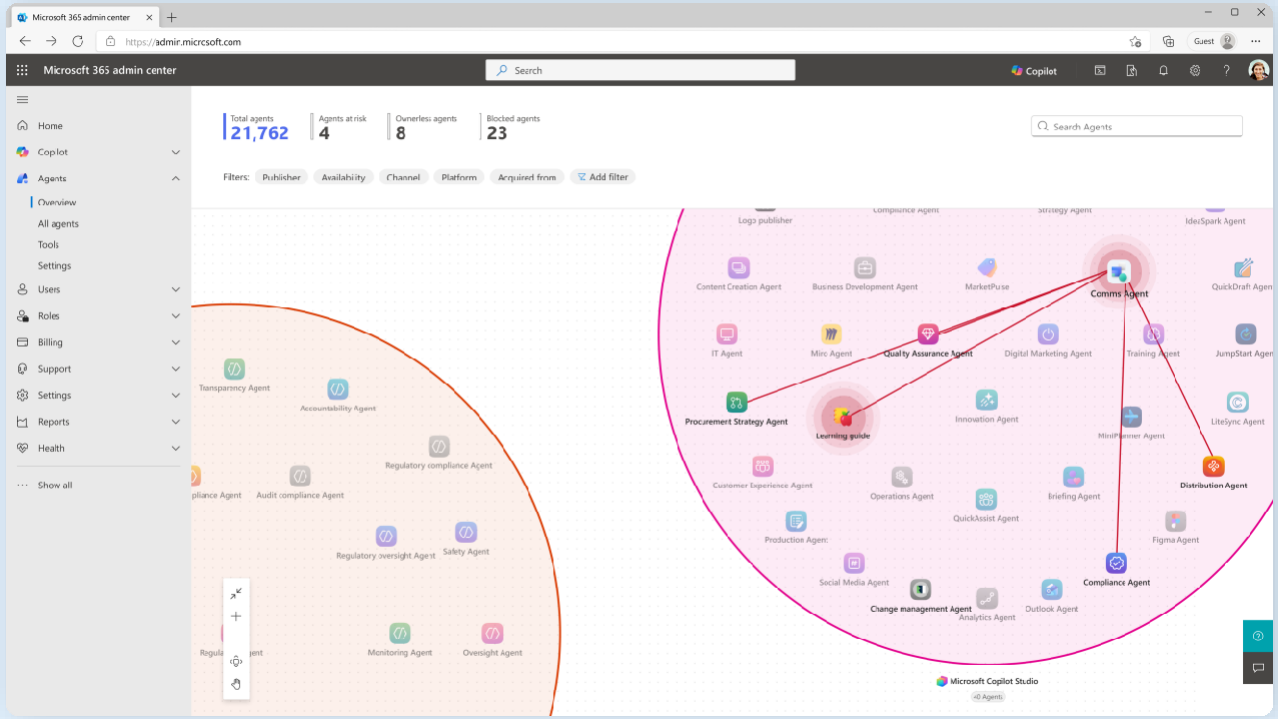
You can’t manage what you can’t see.

As agents proliferate across platforms, teams, and vendors, visibility quickly becomes fragmented. Agent 365 provides a centralized view of all agents in your organization, regardless of how they were created or deployed.

Visibility and understanding at a high level

- A clear inventory of agents across your business
- Insight into how agents are being used and connected
- Early visibility into performance, behavior, and potential risk

With full visibility, teams move from guessing to knowing and from reacting to anticipating.



Register and track agents in one place

Across Microsoft platforms, third-party ecosystems, and custom builds.

Govern: stay ahead as agents operate at scale

Agents evolve. Your oversight must keep pace.

Once agents are deployed, your teams need continuous awareness of how they behave over time. Agent 365 enables ongoing monitoring so teams can detect changes in usage, performance, and risk before they affect your business.

Ongoing oversight and operational awareness

- Real-time and historical insight into agent activity
- Clear signals for operational, security, and business stakeholders
- Fast identification of issues as environments grow more complex

Monitoring enables secure scaling

Operational awareness across IT, security, and business stakeholders.

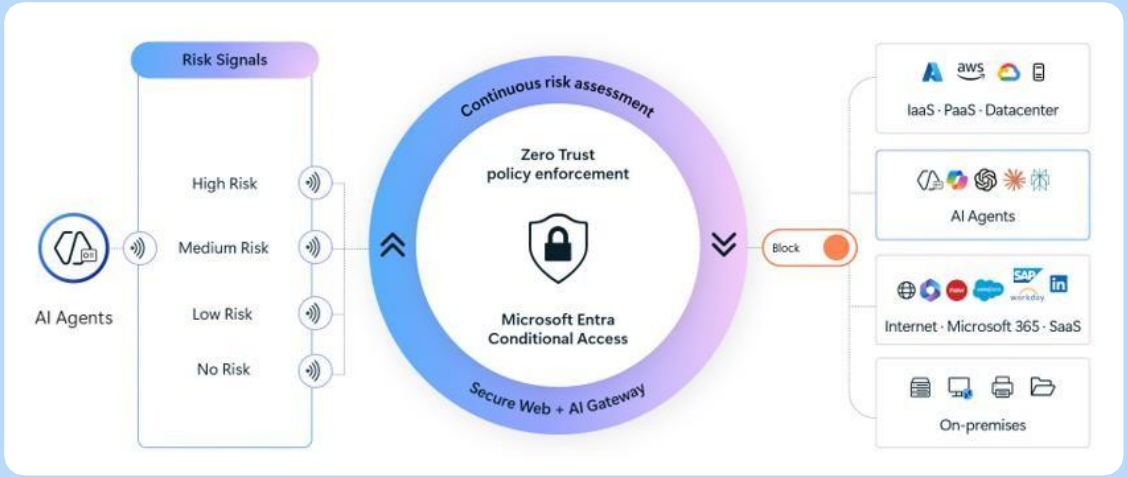
Secure: protect agents like critical enterprise assets

AI agents operate with access, intent, and autonomy. That makes security critical.

Agent 365 extends enterprise-grade security controls from people to agents, protecting identities, enforcing access, and reducing data risk without slowing innovation.

With Agent 365, security becomes an enabler of scale, not a blocker to progress.



Security, identity, and data protection

- Strong identity and access protection for agents
- Safeguards against data oversharing and leakage
- Threat detection and response designed for agent-driven activity

73% of organizations say data privacy and security is the biggest AI risk[1]

Built for teams who manage agents

One control plane. Multiple perspectives.
Agent 365 supports multiple roles across your organization, each with visibility tailored to their needs:

IT leaders gain centralized control and operational confidence

+

Security leaders manage risk across agent identities and data

+

Business leaders gain insight into adoption and operational impact

Now, anyone can see what they need, while sharing a single source of truth.

Not just an IT tool

One control plane

Role-appropriate insight

Shared confidence

From experimentation to enterprise scale

Success doesn’t come from moving fast without controls, but from scaling responsibly with confidence. Agent 365 helps your business evolve from isolated experiments to enterprise operations by providing a concrete control plane for observing, monitoring, and securing agents as part of everyday work.

The future is human-led and agent-operated. Control keeps it sustainable.

Agents are becoming ubiquitous

The future is human-led and agent-operated. Agent 365 keeps you in control.
