AI that works the way your business does

A practical guide to Frontier Transformation for growing businesses

AI can do more for your business

AI offers growing businesses a new way to address rising customer expectations, operational bottlenecks, and the constant pressure to move faster. However, the opportunity goes beyond adding another tool. AI needs to be part of how the business operates, so employees can accomplish more and business data can support better decisions without adding more complexity.

This shift is called **Frontier Transformation.**

Dejora Technologies Limited is here to help you make this shift with Microsoft AI solutions. Microsoft brings productivity, security, data, business applications, and AI together in one connected platform. This helps you move beyond isolated AI tools and create measurable value across your business, starting with the outcomes that matter most to you. It comes down to three key areas:

- **AI that helps your business achieve more.**
- **Intelligence built around the way your business works.**
- **Security that helps you grow with confidence and trust.**

66% of surveyed AI users say that AI has allowed them to spend more time on high-value work.[1]

AI that helps your business achieve more

Give people back time in the tools they already use. With AI that fits naturally into everyday work, teams can see value faster without changing how the business operates overnight or learning a new tool.

Start with familiar experiences

Start with Microsoft 365 Copilot in the apps your team uses, then add agents as you grow.

Extend without a large development team

Build agents with low-code tools in Microsoft Copilot Studio or go further with GitHub Copilot.

Connect people and business processes

Bring productivity, data, apps, and AI together on one platform.

Put agents to work

Agents handle repeatable, multi-step work while your people make the decisions.

Intelligence built around the way your business works

When intelligence is connected across your business, each new AI use case can build on what your business already knows. This helps teams make faster decisions, improve customer experiences, and create repeatable value.

Grounded in your context

Copilot and agents draw on organizational knowledge, business data, workflows, and context to provide answers and actions that reflect how the business operates.

Intelligence that’s yours

Your business data, your context, and the value created from them remain part of your competitive advantage.

Build once, reuse often

Reduce repeated setup by building new Copilot and agent experiences on shared business context.

Agents understand your business processes

Grounded agents can coordinate work across Microsoft 365, Microsoft Dynamics 365, Microsoft Fabric, Microsoft Power BI, and other business systems without separating the action from the context.

Open and adaptable for evolving needs

With Microsoft’s model-diverse approach, choose the right AI capability for each task while keeping it grounded in your own business data and context.

Security that helps you grow with confidence

Protect your people, data, and operations as Copilot and agent use grows, without adding more tools or complexity. Microsoft 365 Business Premium brings security, identity, data protection, and governance capabilities into the same connected foundation as AI.

Protect identities and business data

Microsoft Entra, Microsoft Purview, and Microsoft Defender support identity and access controls, data protection, and threat detection across people, apps, and agents.

Govern AI as usage expands

Understand which AI and agents are being used, what they can access, and how they operate.

Keep people in control

Set objectives, apply judgment, approve important decisions, and remain accountable while AI and agents support execution.

Manage value as AI grows

Use connected security, governance, and visibility to monitor adoption, costs, and outcomes as AI expands across more teams and workflows.

Struber scales its impact across critical infrastructure with Microsoft 365 Copilot

Situation

Struber, a 50-person infrastructure consultancy, needed to compete with multinationals many times its size. With 40 TB of unstructured data slowing decisions, the firm saw an opportunity to redesign how work happened while protecting sensitive client data.

Solution

Working with Microsoft partners, the company rolled out Microsoft 365 Copilot and Copilot Studio to every employee, regardless of technical background. Teams built 40-80 agents supporting legal, safety, finance, and operations, giving consultants greater access to specialized knowledge and support.

Impact

$500,000-$1 million

in equivalent expertise unlocked through agent-led augmentation

40-80

agents operating across the business

STRUBER

> “It wasn’t about a single piece of software or joining two bits of software together. It was which platform could provide the ‘secure garden’ that enabled the creativity for all my employees to experiment with this new way of doing work. And that was Microsoft.”

Start with the outcome that matters most

Frontier Transformation isn’t about adopting AI everywhere at once. It starts by identifying where AI can create measurable value for your business today, then building on that success. That may mean helping employees reclaim time from repetitive work, improving customer experiences, simplifying operations, or strengthening security as AI adoption grows.

Whatever your top priority is, Dejora Technologies Limited has the expertise to help you move beyond isolated AI tools to create connected value across people, information, and workflows with Microsoft AI solutions. Together, we’ll explore your priorities, identify practical Copilot and agent opportunities, and build a roadmap for more secure growth. Get in touch with our team to take the next step in your Frontier Transformation today.
